Timeline

Reporting Period:

Quarterly

Quarter:

Q3

I. Status Update:

Tillage treatments were made on December 2 (Strip Till) and December 3 (Conventional Till) at the research site. While later than planned, favorable late-fall conditions allowed us time to make this critical field operation possible. In addition, planning for field operations and research in 2021 continued through the quarter.

Reporting Start Date:

11/01/2020

Reporting End Date:

01/31/2021

Status Report Submission Date:

02/26/2021

Project Objectives

Objectives:

Objective 1: Support much-needed research into yield benefits of artificial drainage, tillage, management and all interactions for Minnesota producers.

Objective 2: Support long-term research activities that provide real data on production and environmental benefits of artificial drainage, modern tillage systems and their interactions.

Achievements:

Site maintenance continued through this quarter.

Challenges:

Our fall tillage was delayed, but we were able to get it done due to unexpectedly favorable late-fall weather.

Tech Transfer:

none

Contracts:
