

Culture extract/  
toxin assay for  
SDS screening.

**Figure 1.1.** Examples of symptom severities used for the 1 to 6 rating scale where 1 = no symptoms; 2 = leaf showing general slight yellowing or slight red venial chlorosis at the edge of the leaves (<10% foliage affected); 3 = leaf with obvious inter-veinal chlorosis or larger area of venial chlorosis without cupping at the leaf edge (10-30% foliage affected); 4 = leaf with necrosis along a portion or its margin with a little curled at leaf edge (30-50% foliage affected); 5 = necrosis along the entire margin of a leaf and leaf cupped (50-80% foliage affected); and 6 = most of the leaf area (>80% foliage affected) showing interveinal necrosis

**Obj. 1.** Screen adapted Kansas germplasm and KSVT entries for SDS resistance using three high-throughput methods.

CONTROL

+TOXIN

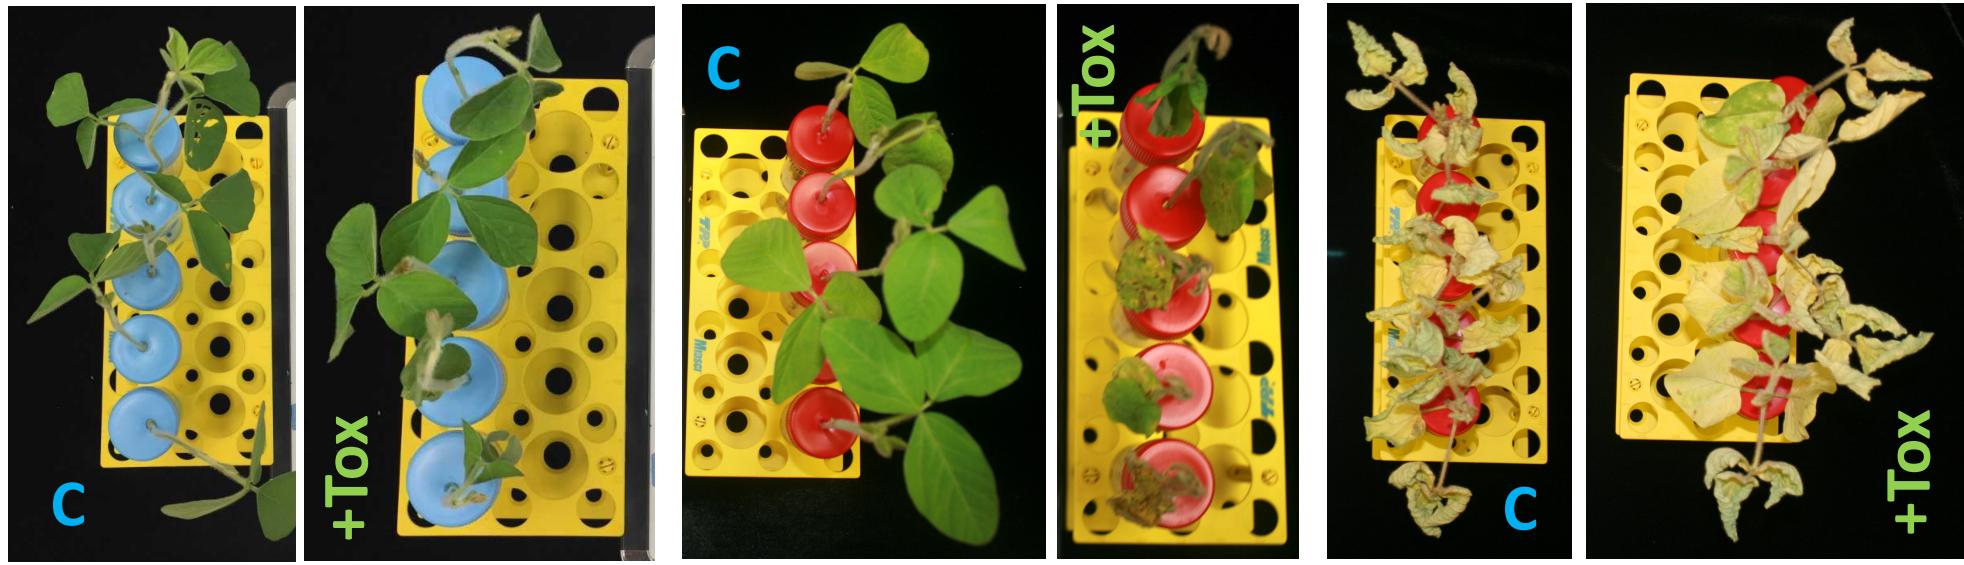

'KS5507 NRR' (non-senescent & toxin resistant)

'KS 13-1830' (non-senescent & toxin susceptible)

'Morgan' (senescent & toxin susceptible)

K16-1786 (NS, ToxR)

K16-1991 (S, ToxR)

K16-1501 (S, ToxS)

Non-senescent and toxin resistant (left), non-senescent and toxin susceptible (middle), and senescent and toxin sensitive (right) entries from the soybean breeding program materials. C = control; +Tox = culture-filtrate.
